MANAGEMENT MEETING · ABOUT 30–45 MINUTES

Demo Script

1. Opening (2 min)

> *"Thanks for making time. We built an app with your name on it to show you what it could do for your team. Before I show it, I'd like to hear how things run today."*

2. Discovery questions (10 min)

- Walk me through a typical day or job, from first call to getting paid.
- Where does your team lose the most time?
- What still lives on paper, in spreadsheets or in someone's head?
- What software do you use today, and what do you wish it did?
- How do you know how the business is doing this week?
- If one task disappeared tomorrow, which would you pick?

Write down their words. Use them when you show the app.

3. Show their custom app (10 min)

- Open it with their logo, colors and name on screen.
- Tie every screen back to a pain they just told you about.
- Keep it short. Show 3–4 things they care about, not every feature.

4. The "talk to the app" moment (3 min)

> *"You don't have to type. Just tell it what you need."*

- Tap the mic and say something real from their day, e.g. "Add a job for Thursday at 9" or "Log this receipt."
- Hand them the phone and let the manager try it.
- Pause. Let them react.

5. How it works

1. **Base demo**: what you just saw, built for your business.
2. **Pick a package** that fits your team.
3. **1 month to build** your app around your workflow.
4. **1 month of edits** while your team uses it, so it fits just right.
5. **Monthly support and hosting** keeps it running and improving.
6. **Dedicated account manager**: the same person you met today stays your one contact and your liaison to our developers.
7. **24/7 support** whenever you need help.

6. Common objections

They say	You say
"It costs too much."	"Compare it to the hours your team spends on the tasks we just talked about. It works every day for about the cost of a few hours of staff time. Which package fits best?"
"We already have software."	"Great, we connect to what you already use, like email, QuickBooks and Google Drive. We fill the gaps it doesn't cover, so you're not replacing what works."
"Is our data safe?"	"Your data is private to your business, access is by sign-in, and it's backed up. We're happy to walk your team through how we protect it."
"We don't have time for this."	"That's why we do the building. Your part is a few short conversations, and your account manager handles the rest. The point is to give you time back."

6. More objections (continued)

They say	You say
"We can do it ourselves / build it with ChatGPT."	"You could, and the tools are getting better. The hard part isn't writing the first version. It's keeping it running, secure and backed up, fixing it at 2 a.m., and changing it as you grow. That's what we take off your plate, so your team stays focused on the business."
"My nephew / our IT guy can build it."	"They may be great at it. The question is who supports it when they're busy or move on. With us you get a dedicated account manager, a development team behind them and 24/7 support. We're also happy to work alongside your IT person."
"We need to think about it."	"Of course. What part do you want to think through? If it's price, scope or timing, let's sort it out now while I'm here, so you're deciding with everything in front of you."
"Just send me some info."	"Happy to. The best info is the app we already built for you. Let's put 20 minutes on the calendar with the people who'd use it, and I'll send the details ahead of time."
"Bad timing. It's our busy season."	"That's when the busywork hurts most. We do the building, and your part is a few short conversations. If you'd rather wait, let's pick a start date now so it's ready before next season."
"What if you go out of business, or we lose our data?"	"Your data is backed up and it's your data. If you ever leave, we help you take it with you. We're happy to show your team how we back things up and protect it."
"Our staff won't use it."	"That's why it's built around how they already work, and they can just talk to it instead of typing. The edit month after launch is there to adjust anything they find awkward."
"We tried software before and it failed."	"Most off-the-shelf software fails because people have to change to fit it. We build around your process, refine it for a month with your team, and stay with you after launch with an account manager and 24/7 support."
"It's too expensive compared to off-the-shelf software."	"Off-the-shelf looks cheaper until you add the extra tools, the workarounds and the hours your team spends filling the gaps. Ours is built to fit, connects to what you already use, and comes with support and hosting."
"I need to check with my partner / the owner."	"Makes sense. Let's book a time when they can join, and I'll walk them through it in person. What do you think will matter most to them?"
"Is AI safe? Will it replace my people?"	"It's built to take repetitive tasks off your people's plates, not replace them. Your team stays in charge, the app works inside your business with sign-in access, and we show you exactly what it does."

7. Close

> *"Which package makes the most sense for you? If we start on [date], your app is ready to use in about a month. Shall we put that on the calendar?"*

- Confirm the package and the start date before leaving.
- Confirm that you stay their account manager and their liaison to our developers.
- Log the outcome in the CRM at crm.vnxt.app the same day.
